Chapter 1

distractionless plug-in for Sublime Text[1]

1.1 Requirements

distractionless targets and is tested against the **latest Build** of Sublime Text, currently requiring `Build 4050` or later.

- Download Sublime Text[2]
  - (stable channel)
  - (dev channel)

1.2 Installation

Using **Package Control** is not required, but recommended as it keeps your packages (with their dependencies) up-to-date!

Installation via Package Control

- Install Package Control[3]
  - Close and reopen Sublime Text after having installed Package Control.
- Open the Command Palette (`Tools > Command Palette`).
- Choose `Package Control: Install Package`.
- Search for `distractionless` on Package Control[4] and select to install.

1.3 Usage

distractionless makes Sublime Text automatically enter Distraction Free mode[5] in a windowed environment when you start editing a file.

distractionless will then make Sublime Text automatically switch back to normal mode as soon as:

- you save, open or clone a file.
- you open new, switch or close tabs.
- Sublime Text gains focus.

Settings

Use the settings of Sublime Text to customize how views are displayed in each mode:

- `Preferences > Settings`
- `Preferences > Settings - Syntax Specific`
- `Preferences > Settings - Distraction Free`

You might want to set the following in `Preferences > Settings`:

```
{
    "auto_hide_menu": true,
    "auto_hide_status_bar": true,
    "auto_hide_tabs": true
}
```

Use the distractionless settings to further customize when and what is toggled:

- `Preferences > Package Settings > distractionless > Settings`

Below the currently supported settings:

```
{
//  number of changes after which UI is toggled automatically
    "distractionless.toggle_after": 1,

//  toggle minimap when switching modes
    "distractionless.toggle_minimap": true,

//  toggle sidebar when switching modes
    "distractionless.toggle_sidebar": true
}
```
